

Made of High grade resin and Epoxy material Bottom Close

The bomb basket is intended to place the IED while transporting the bomb to a safe disposal area. It provides safety to the bomb technician and public in case of any accidental explosion. It is made of high Grade resin / Epoxy which is used to make the basket for high impact resistance and the thermal Insulation material which protects from blast effect.

A net is loosely suspended inside which protects the suspected object from jerks and shocks during transport and prevent the IED directly coming in contact with the bottom or wall of basket.

It can carry with the help of bomb transportation Trailer to a safe disposal area.

Technical Specification –

- Size - Height : 36", Diameter : 24"
- It has a nylon holding net suspended inside the basket to hold the IED in upright position.
- Weight- More than 75 kgs (Bottom Closed)
- Wall thickness 25-30mm.
- Color : Glowing colors for clear visibility to all personal (Orange)
- Blast Capacity 220gms
- Variable size/ protection level are also available
