

BOMB SUPPRESSION BLANKET & SAFETY CIRCLE

Bomb Blanket is used to suppress the blast fragmentation that causes most damages and injuries. Bomb blanket is used in combination with a blast containment safety circle which is placed on its edge around the explosive device. The blanket is then placed over the safety circle and bomb. The safety circle directs the force of the blast upwards direction in sky which contains most of the fragments created by the explosion. Both Bomb blanket and safety circle fold into a compact, easily carried bag. It has heavy duty nylon webbing handling straps which permits the safe placement over a IED's

- Protection Level : V50 17 grain steel fragment @ 500 m/s. (Different Protection Level)
- Size of the Bomb Blanket is 1.5 m x 1.5 m (Different Size Available)
- Size of Safety Circle is 78 x 24inches
- Material : Kevlar/ Aramid Fabric (multiple layers)
- 04 Nos. Nylon web loops each side of Bomb Blanket
- 04 Nos. of Eyelets each corner of Bomb Blanket
- Weight of Bomb Blanket : 18-20kg (Approx) Aramid Kevler Fabric.
- Weight of safety Circle : 10-12kg (Approx) Aramid Kevler Fabric.
- Fire retardant and water repellent cover.
- Carry bag for easy transportation .
